Reality Fracture Report: Learned Archetypes, Bombs, and Synergies

MTGNET

October 27, 2026

Dataset Snapshot

This run on Reality Fracture uses 69,846 unique deck builds and 297,964 game rows. The unsupervised clustering stage produced 10 learned archetypes. Card win rates are games-in-hand (GIH) win rates; an archetype's win rate is over all of its games. The best-performing large shells are Azorius | Desperate Futurescribe / Fatehold Charm, Golgari | Primal Witchstalker / Hapatra, the Desert Fang, Dimir | Recursive Recruitment / Theorix Charm, which already tells us that the format is not a single monolithic color table: it separates into distinct deck families with their own signposts, core cards, and standalone bombs.

How to Read This Report

- **Coreness** measures how central a card is to an archetype: played in many of its decks, characteristic of it, and connected to the rest of the deck. Cards are grouped into Core, Support and Periphery rings. A core card may carry a tag: **signature** (in bold: played in at least 15% of this archetype's decks and in at most one other archetype at that rate) or *staple* (at least 25% of this archetype's decks and at least 15% in three or more archetypes); untagged core cards are neither.
- **Play rate** is the share of the archetype's decks that play at least one copy.
- **Bombs** are cards that are strong on their own. A bomb's **lift** compares, within the decks that play it, the win rate when the card is in hand with the win rate when it stayed in the library, relative to a typical card of the archetype, and is shrunk across archetypes; it is shown in percentage points (pp). Bombs are listed whatever ring they sit in: core and support bombs keep their ring on the site, and only bombs that would otherwise be peripheral go to the bomb island beside the rings.
- A **synergy pair** wins more often when both cards are drawn than their separate effects predict (games-in-hand, adjusted for game length and play/draw). The effect λ is an interaction log-odds, shown as a percentage change in the odds of winning with its 95% confidence interval. Pairs are tested with Benjamini–Hochberg false-discovery control: *verified* means $q \leq 0.10$, *tentative* means $q \leq 0.25$. Few pairs pass; an absent pair means "not detectable with this data", not "no synergy".

- **Payoff** and **engine** roles are decided by synergy arrows only: the synergy pairs (verified or tentative) whose direction is significant. In such a pair the arrow points from the payoff, the card that wins more when drawn without its partner, to the engine it rewards; a card whose arrows mostly point out of it is a payoff, one whose arrows mostly point into it an engine. The arrow reflects each card's standalone strength within the pair, not a direction of the synergy itself. Played-together links carry the same arrow on the site as context only; they do not set roles.

Out of 496 card pairs tested, 0 are verified synergies (BH $q \leq 0.10$) and 3 tentative ($q \leq 0.25$). The strongest tentative pair is `Way of the Healer` + `Your Fate Ends Here`: +24% odds of winning when both are drawn (95% CI [+8, +43]%, 1,320 games).

Golgari | Primal Witchstalker / Hapatra, the Desert Fang

This cluster contains 7,224 decks across 30,449 games and posts a baseline win rate of 56.47%. None of the 496 card pairs tested passed the false-discovery-controlled synergy test, so any specific two-card synergy in this shell is unproven; its strength comes from its core and card quality.

4 Bombs: Cards That Are Good Alone

Cards flagged as bombs in at least one archetype, whatever ring they sit in on the site, each shown in the archetype where its lift is largest. *Lift*: within the decks that play the card, the win rate when it is in hand vs when it stayed in the library, relative to a typical card of the archetype, shrunk across archetypes. *Raw lift*: the card's games-in-hand win rate minus the archetype baseline, not shrunk.

10 Bottom-Line Reading

This report treats the format as a deck ecosystem rather than a flat card ranking. Each archetype is described first by its core: the cards that are played in most of its decks, characteristic of it and connected to the rest of the deck. Bombs are listed separately because they win on their own and are worth taking (and often splashing) whatever the shell. Synergy claims are deliberately conservative: only pairs that survive a false-discovery-controlled interaction test are reported, with their effect size and confidence interval, so the short pair list is a feature of honest statistics rather than a lack of interplay between the cards.
